Demo Bouncing Ball

- A rubber ball is thrown into the air with a velocity of 15 meters per second from a height of 10 m.
- Only gravitation is the force affecting the ball.
- The speed of the ball is decreased to 80 % when the ball hits the ground and the direction is reversed .
- The position of the ball is shown in the lower plot of the scope, and the velocity of the ball is shown in the upper plot.

Demo Bouncing Ball

- Differential equation of the model

$$m\ddot{x} = -mg$$

$$\ddot{x} = -g$$

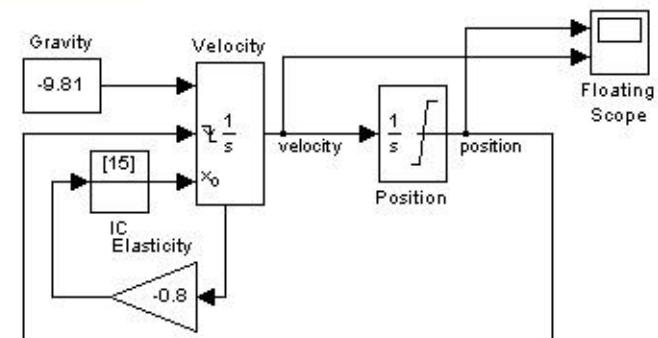

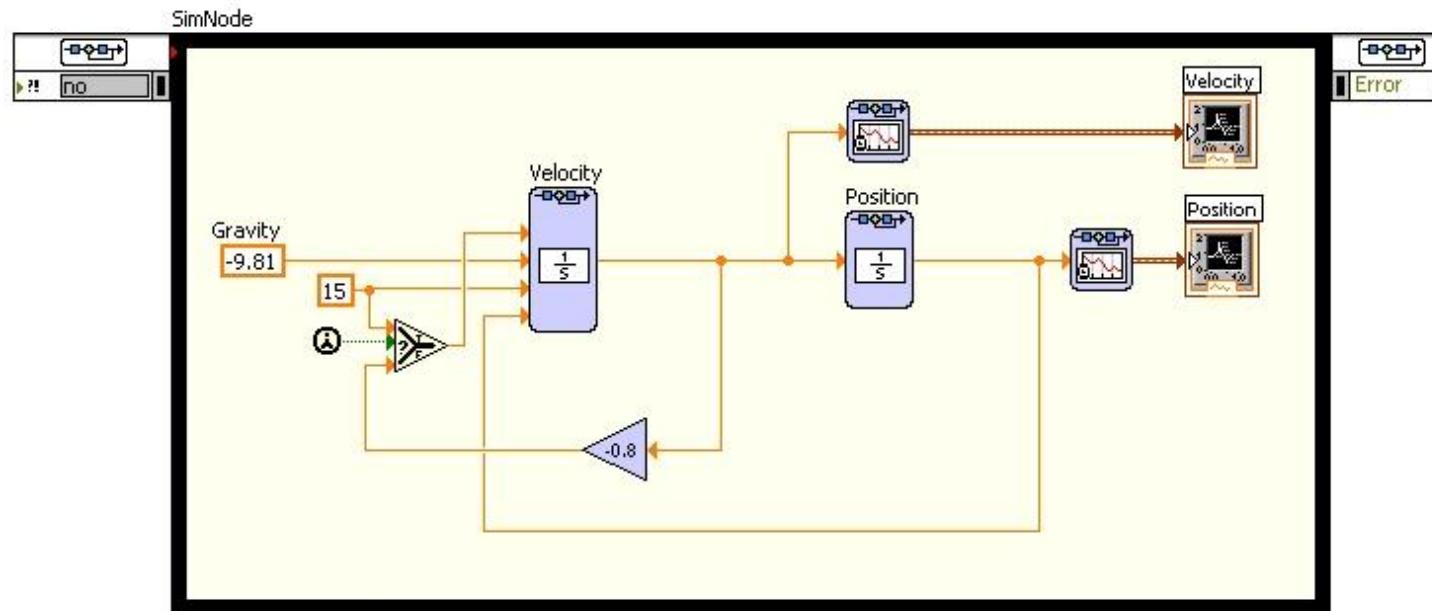

- Initial condition

$$\dot{x}_{[0]} = 15 \text{ m/s}$$

$$x_{[0]} = 10 \text{ m}$$

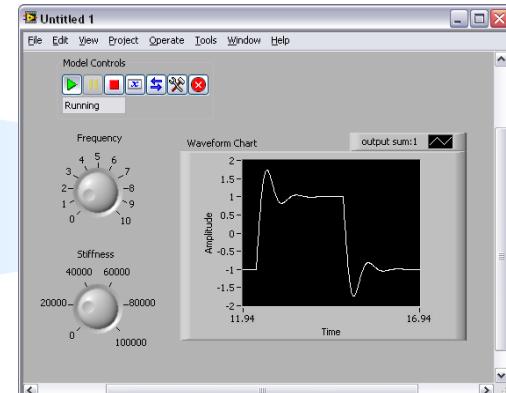

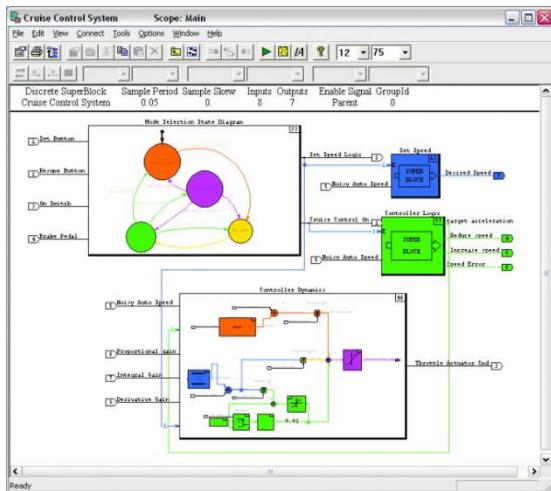

Demo Bouncing Ball

NI LabVIEW Simulation Interface Toolkit (SIT)

- Use the LabVIEW Simulation Interface Toolkit to:
 - Build powerful user interfaces for models developed in the Simulink® environment, and deploy them to real-time hardware with LabVIEW Real-Time*
 - Use Models from MatrixX

NATIONAL
INSTRUMENTS™

System Requirements

- The MathWorks MATLAB® 6.0 or later
- The MathWorks Simulink® 4.0 or later
- The MathWorks Real-Time Workshop® 4.0 or later
- Microsoft Visual C++ 5.0 or later
- Gcc WindRiver Compiler for VxWorks
- National Instruments LabVIEW 7.0 or later, Full or Professional Development Systems
- *National Instruments LabVIEW Real-Time Module*
- NI-DAQ

LabVIEW MathScript

- **Powerful textual programming for signal processing, analysis, and math**
 - More than 650 built-in functions
 - Reuse many of your m-file scripts created with The MathWorks, Inc. MATLAB® software and others
 - Partially based on original math from NI MATRIXx
 - **A native LabVIEW solution**
 - Interactive and programmatic interfaces
 - Does not require third-party software

NATIONAL INSTRUMENTS™

Control Design MathScript Plug-In

- Use a MathScript node to combine your existing m-files with a flexible LabVIEW user interface
 - Use MathScript text-based interactive environment for design and analysis
 - Integrate controls work with built-in numerical math and signal processing functions in MathScript or native LabVIEW VIs and toolkits

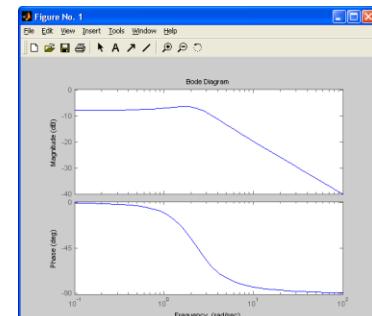

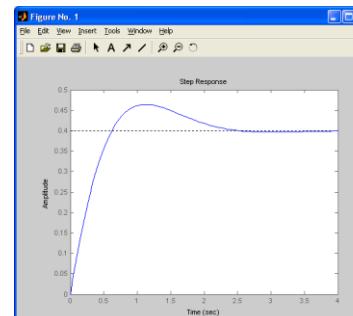

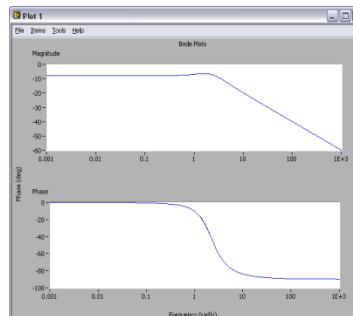

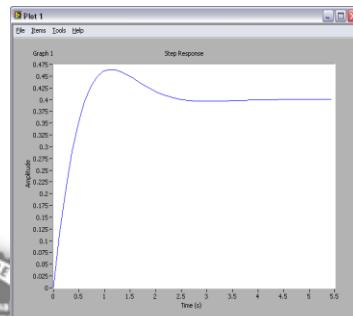

Little or No Learning Curve for Customers Familiar with The MathWorks Inc. MATLAB® Language Syntax

LabVIEW MathScript Syntax

```
>>num = [1 2];  
  
>>den = [1 3 5];  
  
>>sys = tf(num,den);  
  
>>step(sys)  
  
>>bode(sys)  
  
>>pole(sys)  
ans =  
  
-1.5 + 1.6583i  
-1.5 - 1.6583i
```

MATLAB® syntax

```
>> num = [1 2];  
>> den = [1 3 5];  
>> sys = tf(num,den);  
>> step(sys)  
>> bode(sys)  
>> pole(sys)  
  
ans =  
  
-1.5000 + 1.6583i  
-1.5000 - 1.6583i
```

NATIONAL INSTRUMENTS™

Hardware-in-the-Loop (HIL) Simulation

Testing production controller with simulated plant

LabVIEW for Design, Prototype, and Deploy

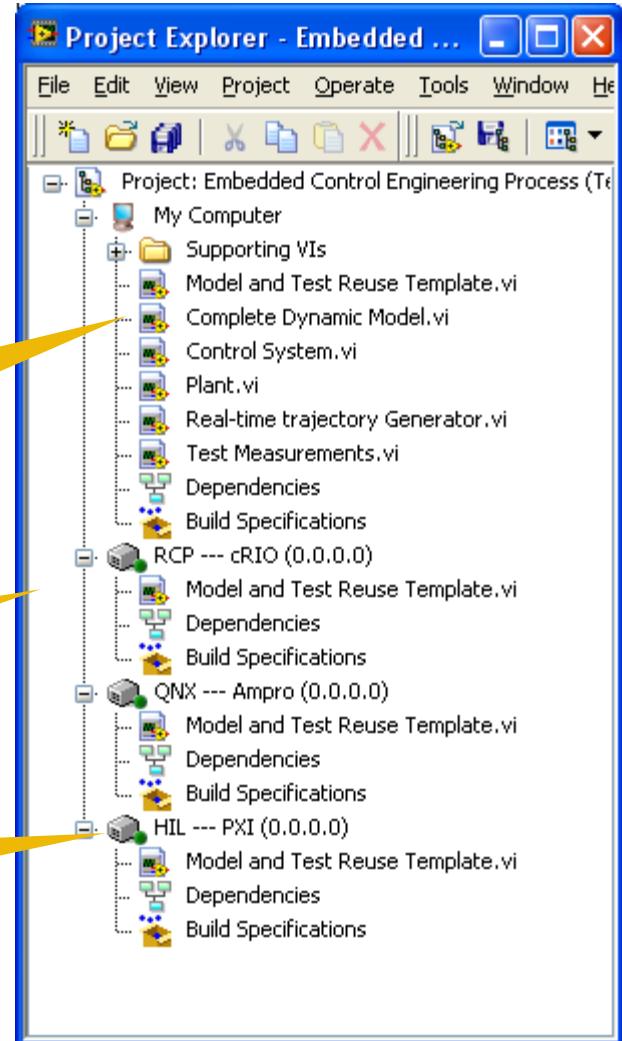

LabVIEW conditional compiling technology provides for:

- Model reuse
- Test reuse

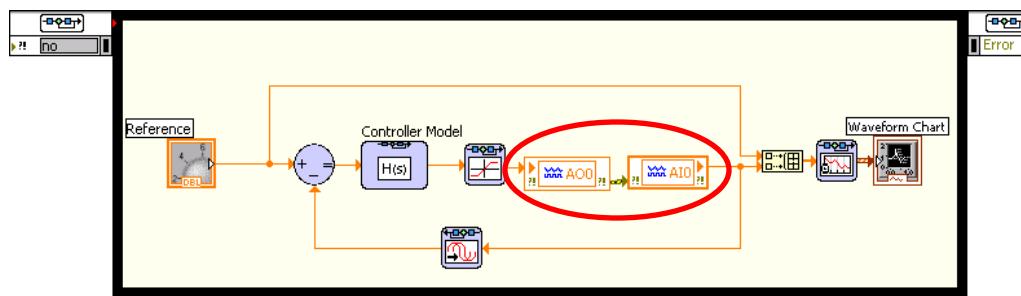

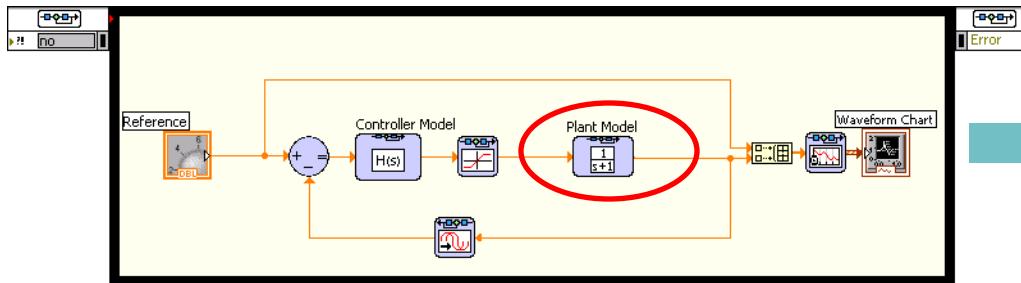

Design

Prototype Target

HIL Target

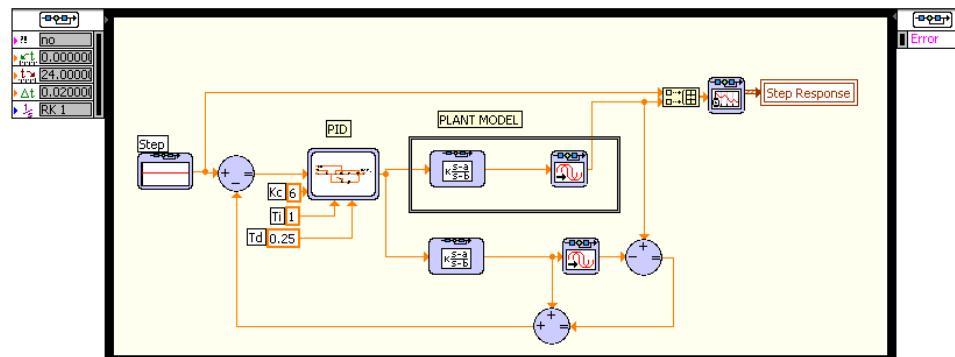

PAC Algorithm Deployment

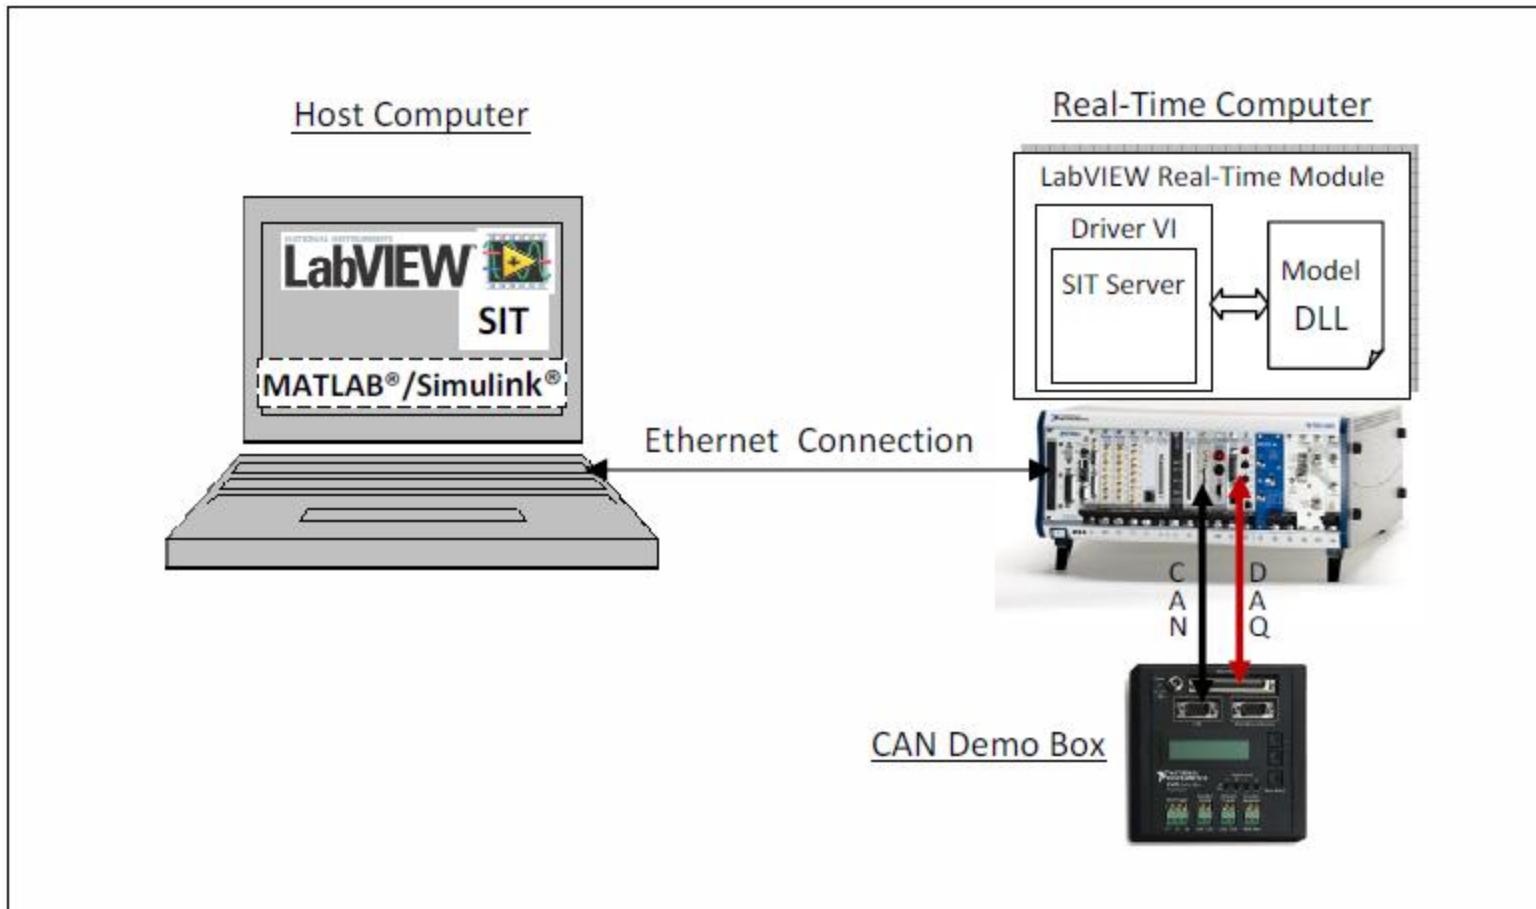

LabVIEW Control Design and Simulation Benefits

- *Complete simulation and real-time implementation capability – stay in one environment from design to test to implementation*
- LabVIEW user interface to change and observe parameters as simulation or control system is running
- Use any LabVIEW VI or programming structure inside or outside of simulation loops:
 - Integrated design and simulation, batch simulation
 - DAQ, RIO, vision, or CAN for I/O and feedback
- Easily create parallel and multirate simulation or control loops

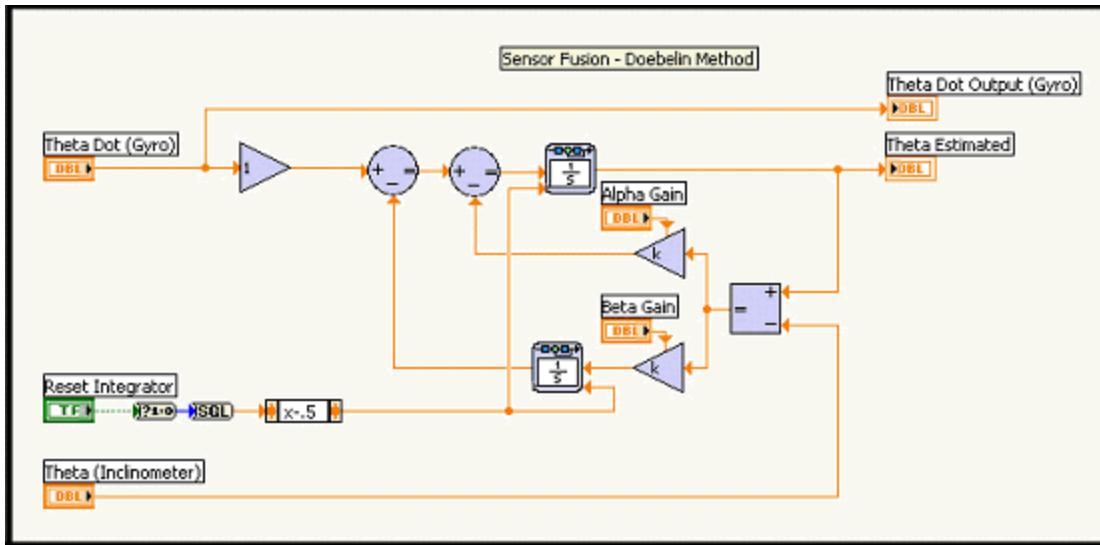

SIT / HIL Demo

RPI Human Object Transporter

- Professor Kevin Craig, Rensselaer Polytechnic Institute (RPI)
- LabVIEW Simulation Module, CompactRIO, LabVIEW Real-Time, LabVIEW PDA
- Team of undergrads completed project in 4 months!
